Application

Coupler
Emergency Paging System
Wall Station

Station

Products Used

Control CU1626 Page/Party to Radio

Control RP1921D2 Radio Page/Party

Control RP2322AO Radio Page Amplifier

Problem

At a large power plant scrubber installation, there was a requirement for emergency page announcements to be broadcast to all of the various contractors working on the project. The large area of the project didn't lend itself to extending the existing wired Page/Party system.

Solution

A coupler was installed on the wired page/party system to couple it to a Control radio page system. Radio page/party wall stations were installed at a couple of key locations to provide access to the system. A number of outdoor speaker amplifier stations were installed in a number of locations to provide complete coverage of the construction site. A switch was installed at the power station control room to allow only emergency pages to be coupled to the scrubber emergency page system.

Benefits

- 20 watts of audio output
- No wiring between stations
- Relocate or add stations without additional wiring
- Range up to two miles
- Stainless steel construction
- Conformal coating on printed circuit cards
- Interfaces to Control, Gai-Tronics, or Femco Page/Party Systems
- Single or five party lines

Conclusion

The Control radio page/party system is an ideal way to extend an existing page/party system when hard wiring isn't practical.
