## RoadWay Vision Systems Network Video Controller

*The RVS8000 Network Video Controller provides real-time local control of CCTV system components in addition to providing a network video and control presence through an Ethernet network connection.*

*Modern CCTV control systems require the ability to utilize two concurrent camera control methods: local joystick control for accurate and responsive high speed PTZ control as well as less responsive network based PC mouse control. The RVS 8000 provides this capability by seamlessly blending local joystick PTZ control with network workstation mouse control. The RVS 8000 provides system wide user priorities, partitioning and privileges.*

282 Treehaven Ave.  
Powell, OH 43065
